

AdmissionCare

Fix bed status issues at the root and streamline the admission process for physicians.

THE PROBLEM WITH BED STATUS DETERMINATIONS

53% of initial denials are due to lack of medical necessity from poor documentation.

94% of Recovery Audit Contractors (RACs) focus their time on short stays.

\$750,000 loss per hospital due to inpatient denials.

\$2.6M+ loss per hospital due to inappropriate bed status determinations.

Patients placed in the wrong bed status with improper documentation results in massive revenue loss and patient dissatisfaction.

Physicians **can't keep up** with constantly changing criteria needed to admit patients to the hospital, and hospitals spend **tons of money and resources** fixing bed status issues retrospectively.

We created AdmissionCare to streamline the admission process for physicians by putting the criteria for bed status determinations directly in the EHR.

Admitting physicians have a frustrating job and can't focus on patient care because of interruptions related to bed status.

Here's what physicians who use AdmissionCare say...

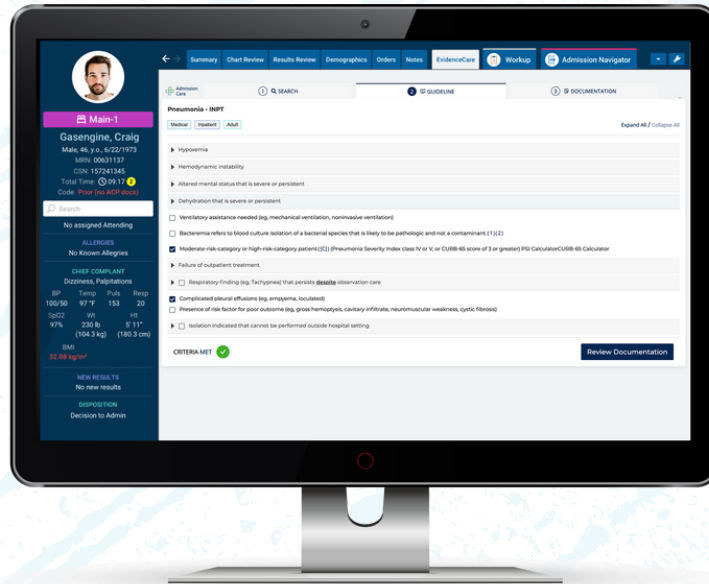

EMPOWER CLINICIANS AT THE POINT-OF-CARE

Reduces medical necessity denials and documentation queries

Accelerated handoffs between emergency physicians and inpatient teams

Removes interruptions from utilization review and physician advisors

Epic

ORACLE Cerner

HOW IT WORKS

- 1 **Integrate into the clinician's EHR workflow**
- 2 **Determine the most appropriate bed status for each patient at admission**
- 3 **Synchronize payer criteria with the clinician's documentation**
- 4 **Collect revenue for the care provided, while avoiding costly denials**
